Marketing Management

Week 1, Lecture 1: Basics of Marketing Management

1. Core idea of the lecture

Most people think marketing means advertising or putting content on a website. This lecture builds the correct meaning step by step: marketing is about markets, a market is a collection of customers, so marketing is about satisfying customers' needs and wants better than competitors at a profit. It is done through four processes (exploring and choosing, designing, delivering and communicating value). The lecture ends with two short case studies showing why you should talk about **benefits and value**, not only features.

> **In one line.** Marketing is a set of processes for choosing, designing, delivering and communicating value to customers; **value = perceived benefits ÷ perceived costs**.

2. The myth

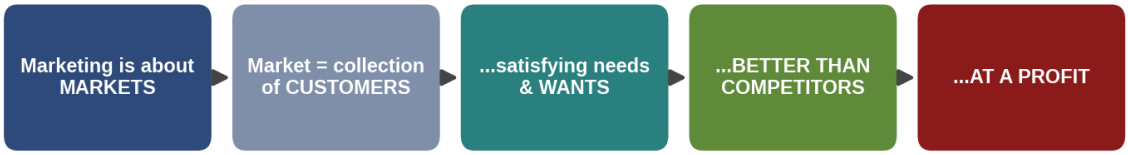

Many people (including engineers and new undergraduates) believe **marketing = advertising or putting content on the company website**. This is a myth. Advertising is only a small part of one process (communicating the value). Marketing is broader and more strategic, and it is as much science as art and practice.

3. Building the definition step by step

The word *marketing* contains the word *market*, so start there.

- **Common (wrong) idea:** a market is a place where buyers and sellers meet to exchange goods, services and money.
- **In business terms:** a **market is the collection of customers**. Terms like market size, target market, TAM, SAM, SOM all refer to a group of customers.
- So marketing is about customers, specifically about satisfying their **needs and wants**.

How the lecturer builds the idea of marketing, step by step

GOAL of marketing: satisfy needs and wants of customers better than competitors, at a profit

Figure 1. *How the definition of marketing is built up*

Term	Meaning	Example from the lecture
Need	A basic requirement	Food, shelter, clothing
Want	A need directed towards a specific item	Hunger becomes "I want a burger / pizza today"

Two parts of every good definition: the *goal* (satisfy needs and wants better than competitors at a profit) and the *what it is / what it does* (the set of processes). Profit matters because it sustains and grows the company; doing it better than competitors matters because customers have choices.

4. The concept of value

Value = Perceived benefits ÷ Perceived costs. Both sides mix tangible and intangible items.

- **iPhone example:** benefits = high-quality phone and camera, good UI (tangible) plus pride of owning it (intangible).
- Costs = the high price, plus effort such as travelling to a far-away store or **search cost** (time spent searching for the product).

5. The four processes of marketing

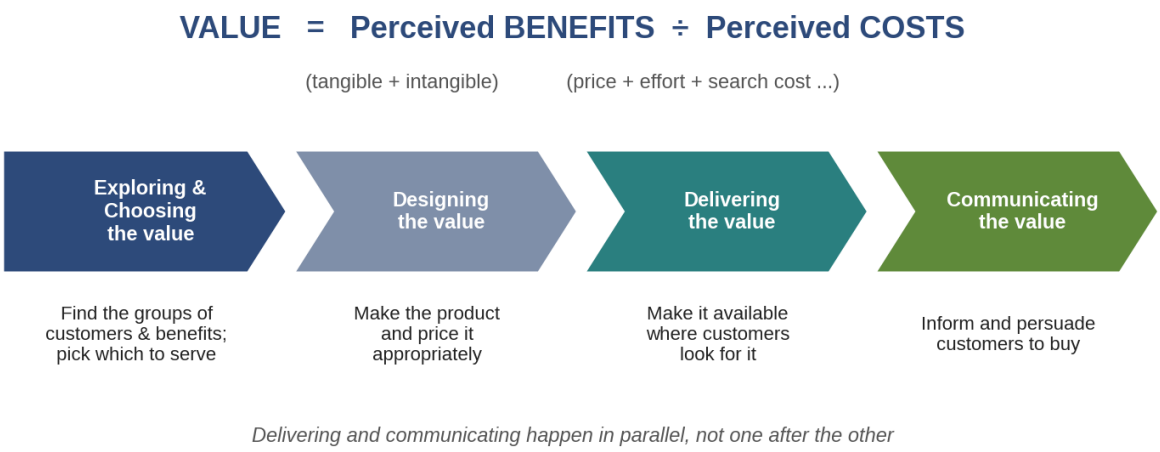

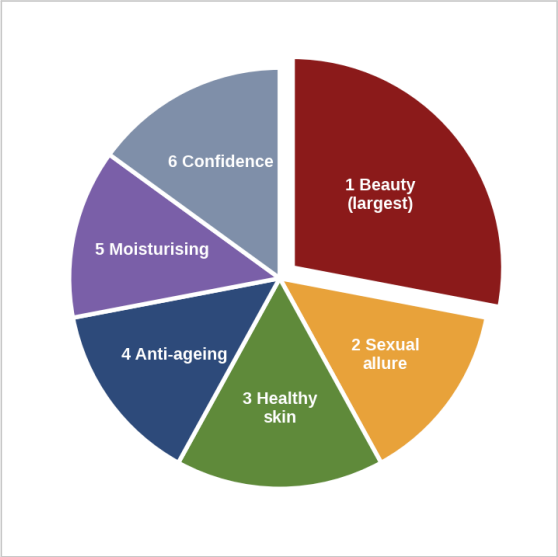

Figure 2. *Value formula and the four marketing processes*

Process	What it means	Examples
Exploring and choosing the value	Explore which groups of customers want which benefits; then choose which group (segment) to serve	Customer research, segmentation
Designing the value	Make the product to deliver the chosen benefit and price it appropriately	Ingredients, packaging, name, bottle shape, price
Delivering the value	Make the product accessible where customers look for it	E-commerce, quick commerce (Blinkit, Zepto), physical retail
Communicating the value	Inform and persuade customers to buy	Advertising, digital and social media, print, TV, PR, billboards, personal selling

Advertising and website content are just **part of communicating the value**, which is the last process. Delivering and communicating happen in parallel; the slide shows them in a line only for convenience.

6. Worked example: face-cream market (exploring and choosing the value)

Imagine a global cosmetics company entering the **face-cream market for females aged 14 and above**. The whole market is a collection of customers, but they do not all want the same benefit.

Exploring the value: find the groups. Here there are six segments, each with a different primary benefit (beauty, sexual allure, healthy skin, anti-ageing, moisturising, confidence). Segment 1 (beauty) is the largest group.

Choosing the value: pick which segment(s) to build the product for. A company should not try to serve all six, because a product that claims to do everything is not trusted, and not every segment has a healthy, growing, reachable market.

Designing: once beauty is chosen, design a cream, packaging and price that clearly deliver beauty.

Key principle. Marketing means **understand the customer first, then make the product**, not make the product first and then take it to the market. So marketing starts before the product exists.

7. Marketing as a function; what a marketing manager does

Marketing is an **organisational function** (most firms have a marketing department) and a **set of processes**. A marketing manager manages these four processes so customers are better served and the firm earns a profit. This is why marketing management is called the art and science of handling them.

8. Why should a future professional learn marketing? Features, benefits, value

Even a simple job like selling a product, or pitching your own skills to a friend or parent, goes better with marketing thinking: **sell benefits and value, not just features.**

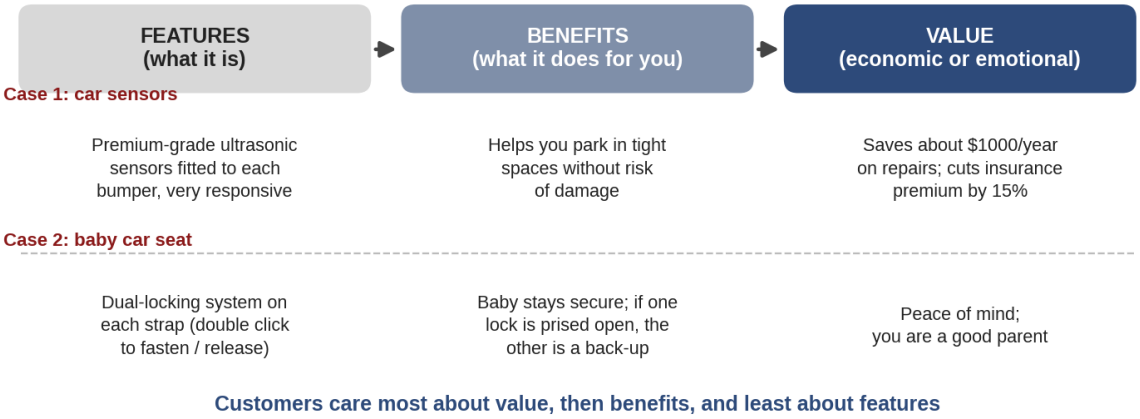

Figure 3. *Feature → Benefit → Value for the two case studies*

Figure 4. *Lecture slide: Case Study 1 (car sensors)*

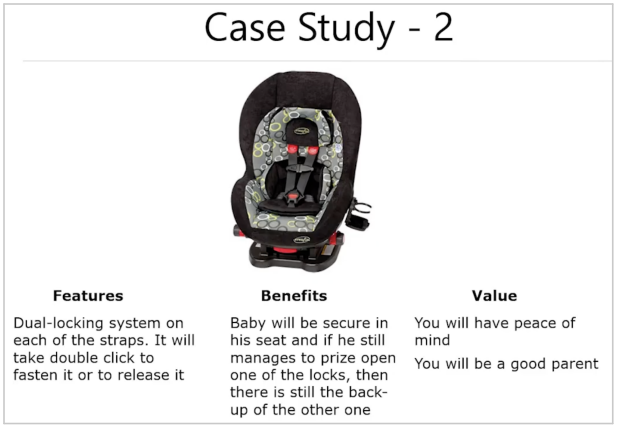

Figure 5. *Lecture slide: Case Study 2 (baby seat)*

Case study reflections (3 questions to ask about any product). 1) What are the product **features**? 2) What **benefits** do they give customers? 3) How can the benefits be translated into **value** for customers (economic or emotional)?

Customers care most about **value**, then benefits, and least about features. Good TV ads spend more time on benefits and emotional value than on features.

Recap example (start of Lecture 1.2): a pack of aloe vera facial wipes mostly states features ("moisturizing aloe vera facial wipes", "refreshes skin"). It could say much more about the benefits and the emotional value (happy, fresh, confident). Consumers buy for benefits and for the **terminal value**, which is economic, emotional or both.

Homework from the lecture: make a feature-benefit-value map for a smartphone and a smartwatch, then try promoting each to a friend or parent in two ways (features-heavy vs benefits-and-value-heavy) and see which convinces better.

9. Names and spellings corrected from the transcript

The automatic transcript garbles several names. These notes use the correct forms.

Transcript	Correct
‘Blinket’, ‘Zumato’, ‘Zeppto’	Blinkit, Zomato, Zepto
‘Altra sonic sensor’	ultrasonic sensor
‘marketeteer’, ‘marketeer’	marketer
‘TAM, SAM, SOM … serviceable addressable addressable market’	TAM (total addressable market), SAM (serviceable addressable market), SOM; the lecturer names the first two

10. Key terms

Term	Meaning
Market	Collection of customers (not a place where buyers and sellers meet)
Need	Basic requirement such as food, shelter or clothing
Want	A need directed towards a specific item
Value	Perceived benefits divided by perceived costs
Terminal value	The final economic or emotional value a customer gets
Segment	A group of customers in the market who want a similar benefit
Marketing	Set of processes to satisfy needs and wants of customers better than competitors at a profit
Marketing management	Art and science of handling those processes
Search cost	Time and effort spent looking for a product; part of perceived cost

11. Quick revision points

- Marketing is not just advertising or website content; that is only part of communicating the value.
- A market is a collection of customers. Marketing is about satisfying their needs and wants better than competitors at a profit.
- Value = perceived benefits ÷ perceived costs (tangible and intangible on both sides).
- Four processes: explore and choose, design, deliver, communicate the value. Delivering and communicating run in parallel.
- Understand the customer first, then make the product.
- Sell benefits and value (economic or emotional), not only features.
- Homework: feature-benefit-value map for a smartphone and a smartwatch.

Marketing Management

Week 1, Lecture 2: Marketing Management Framework: 5Cs, STP and 4Ps

1. Core idea of the lecture

Lecture 1.1 gave the four processes. This lecture lists the **analytical and decision-making activities** inside them. Together these form the Marketing Management Framework: situation analysis (5Cs), setting marketing objectives, strategic marketing (STP), the marketing mix (4Ps), and evaluation and control. The Tata Nano is used as the running example.

In one line. The framework answers five questions: where are we now, where shall we go, what value should we offer, how do we offer it, and how do we stay on track?

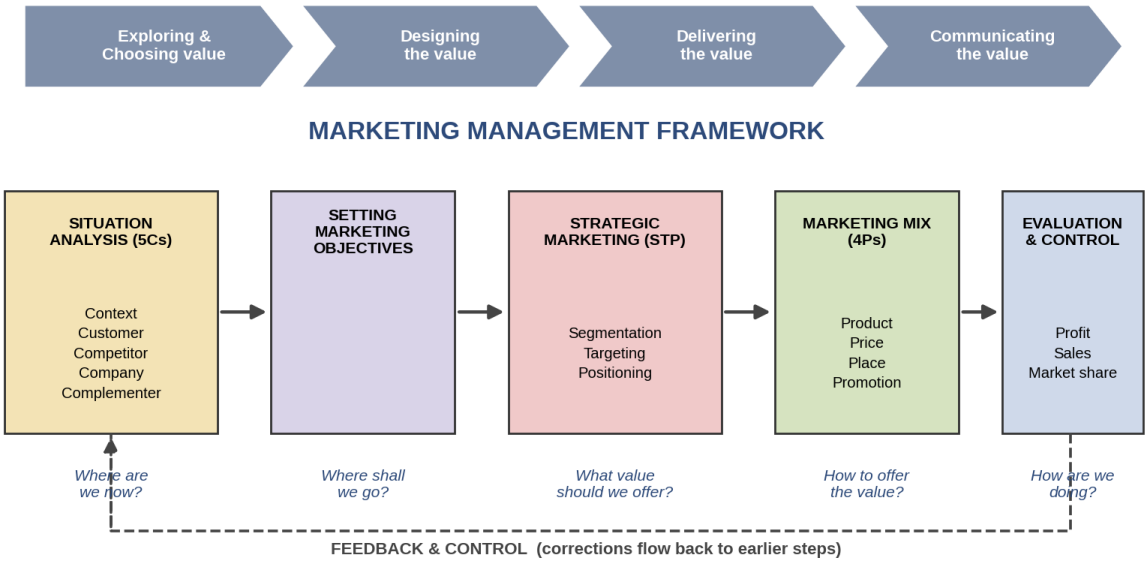

Figure 1. The Marketing Management Framework (flow of activities with feedback and control)

Who uses this framework?. New companies launching a product, existing companies launching a new product, and existing companies assessing and improving a current product. Written out, it is the **marketing plan**.

2. Situation analysis: the 5Cs

Why: to understand your environment before narrowing down to a value to deliver, in the same way police first ask questions (when, where, who knew) before chasing a suspect. It shows what is possible and feasible, what the market will accept, and what competitors already offer. The **output** is a view of strengths, weaknesses, opportunities and threats (SWOT).

C	What you study	Tata Nano example from the lecture
Context	Macro environment: political, economic, social, technological (PEST); Porter's five forces (later in course)	Indian middle class growing, incomes and aspirations rising in the late 2000s
Customer	Habits, beliefs, attitudes towards the product category	Aspiring to move from two-wheeler to a car
Competitor	What rivals make, so you can do better	Maruti Alto, Hyundai Santro / Eon
Company	Own strengths and capabilities	Part of the large Tata group; frugal engineering, strong R&D. Can a car under one lakh be built?

C	What you study	Tata Nano example from the lecture
Complementer / collaborator	**Collaborators**: partners such as banks (finance) and supply-chain partners. **Complementers**: firms whose products raise your sales	Banks financing buyers. Another example: charging stations complement electric cars (more stations, more EV buyers)

3. Setting marketing objectives

Decide the target. Nano example (assumed numbers): sell about 2.5 lakh units in year one, with break-even at about 2 lakh units per year.

4. Strategic marketing: STP

"Strategic" means **long-term, resource-intensive and irreversible**. STP decisions are strategic.

Step	Meaning	Nano example
Segmentation	Divide the market into groups; each segment differs in the primary benefit it wants	Face-cream market split into six benefit groups (Lecture 1.1)
Targeting	Choose which segment(s) to serve: one you can serve effectively and efficiently, that is growing, and that will give profit	Segment of two-wheeler riders wanting to upgrade to a budget car (no competitor was targeting it)
Positioning	Create a perception of your product in customers' minds **relative to competitors**, using your differentiating benefit	Perceived as the budget / cheapest car

5. Marketing mix: the 4Ps (how to offer the value)

P	Decisions	Process	Nano / other example
Product	Ingredients, features, colour, texture, shape, packaging, brand name	Designing	Design of the car, branding, colour
Price	A price that works for both the company and the customer	Designing	Sub one lakh car
Place	Distribution: product accessible at convenient locations	Delivering	Dealerships across the country (example given: 450); FMCG goods in kirana stores
Promotion	Communicate the chosen positioning via media, adapted to each medium	Communicating	TV and print differ from LinkedIn, Twitter or Facebook messages

6. Evaluation and control

After launch, keep monitoring: **profit analysis, sales analysis, market-share analysis, customer perception** and so on. If sales or perception fall, it is a signal to correct something in an earlier step (situation analysis, STP or the 4Ps). This is the **feedback loop** in Figure 1.

> **Marketing manager's job in one line.** Run situation analysis, set objectives, do STP to **explore and choose** a value; use the 4Ps to **design, deliver and communicate** it; and keep evaluating, so customers' needs and wants are met better than competitors at a profit.

7. Names and spellings corrected from the transcript

The automatic transcript garbles several names. These notes use the correct forms.

Transcript	Correct
‘Marauti Alto, Hyundai Centro and Eon’	Maruti Alto, Hyundai Santro and Eon (the lecturer is unsure about Eon)
‘situation analysis, STP, 4C’s’ (in the closing summary)	situation analysis, STP and the 4Ps

Transcript	Correct
‘strength weakness and opportunity and threat’	SWOT: strengths, weaknesses, opportunities, threats

8. Key terms

Term	Meaning
Situation analysis (5Cs)	Study of context, customer, competitor, company and complementer
Complementer	Firm whose product raises sales of yours (charging stations and electric cars)
Collaborator	Partner such as a bank or supply-chain partner
Strategic	Long-term, resource-intensive and irreversible
STP	Segmentation, targeting, positioning
Positioning	Perception of your product in customers' minds relative to competitors
Marketing mix (4Ps)	Product, price, place, promotion
Evaluation and control	Monitoring profit, sales, market share and perception, and correcting earlier steps

9. Quick revision points

- Framework: 5Cs, objectives, STP, 4Ps, evaluation and control, with feedback.
- 5Cs: context, customer, competitor, company, complementer (and collaborator). Output: strengths, weaknesses, opportunities, threats.
- Strategic means long-term, resource-intensive and irreversible; segmentation, targeting and positioning are strategic.
- Positioning is about perception relative to competitors (Nano: the budget car).
- 4Ps: product and price design the value, place delivers it, promotion communicates it.
- Evaluation and control watches profit, sales, market share and perception, and signals what to correct.

Marketing Management

Week 1, Lecture 3: Strategic Planning at the Corporate Level: Corporate Mission and SBUs

1. Core idea of the lecture

A marketing manager works inside a larger organisation and takes direction from the levels above. This lecture describes the three levels of a large organisation (corporate, strategic business unit, functional) and the four activities done at the corporate level. It looks closely at the first two: **defining the corporate mission** and **establishing strategic business units (SBUs)**. Allocating resources continues in Lecture 1.4.

> **In one line.** The corporate level decides which businesses the company is in (mission) and how they are organised (SBUs); marketing planning then follows the direction set above it.

2. Three levels in a large organisation

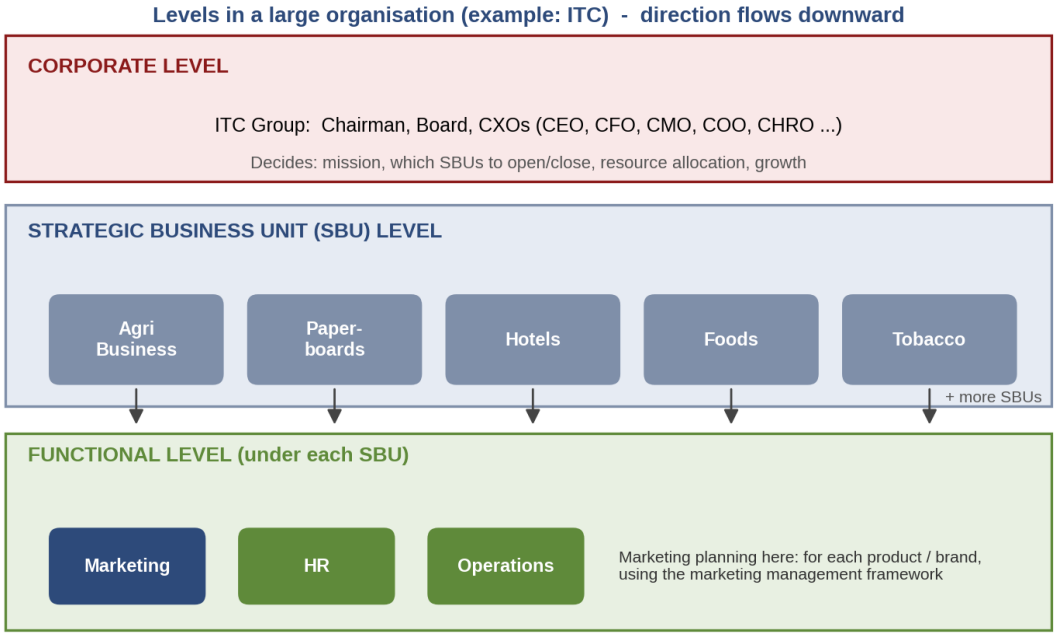

Figure 1. *Corporate, SBU and functional levels (ITC example)*

Level	Who	Planning done
Corporate	Chairman, MD, board, CXOs (CEO, CFO, CMO, COO, CHRO); sometimes SBU heads too	**Strategic planning at corporate level**
Strategic Business Unit (SBU)	Each individual business, led by an SBU head	**Strategic planning at business-unit level**
Functional / product-brand	Marketing, HR, operations under each SBU	**Marketing planning at product / brand level** (the framework from Lecture 1.2)

Figure 2. Lecture slide: P&G example. C-level at the top; businesses such as Beauty, Fabric and Home Care, Grooming, Health Care, Baby/Feminine/Family Care; each with Marketing, Operations, HR

Why study the higher levels?. A marketing manager takes direction from the SBU head, and the SBU head takes direction from the corporate level. Marketing must **align with the SBU's plan** on how it will compete. Jumping straight into the marketing framework without this context is not a good idea.

3. Four activities at the corporate level

#	Corporate activity	What it means
1	Defining the corporate mission	Decide which businesses we are in and which we will not enter
2	Establishing SBUs	Decide to open a new business unit (or shut one)
3	Allocating resources to SBUs	Which SBU gets more or fewer resources for current and future growth (Lecture 1.4)
4	Assessing growth opportunities	How to grow profit and sales: do better in existing businesses or open new ones; also close an SBU that is not doing well

4. Activity 1: Corporate mission

A mission statement defines **what the organisation is, why it exists (its reason for being)**, which businesses it is in, and which it will stay out of.

Example: McDonald's mission (as shown on the slide). To provide fast-food customers food prepared in the same high-quality manner worldwide: tasty, reasonably priced, delivered consistently in a low-key decor and friendly atmosphere.

Reasons for having a mission statement

- Helps define the company's business and establish the brand.
- Gives employees a shared sense of purpose and direction.
- Gives the company a basis for evaluating opportunities.
- Helps employees focus their efforts and suggest ideas that fit what the company is trying to do.

Example: Google is not in hotels even if hotels boom, because its mission lies in software and hardware. Like a student who spreads effort across arts, commerce, medical and sports and loses focus, a company without a mission wastes effort.

Five dimensions used to state a mission (3 internal resource + 2 external focus; use one or combine)

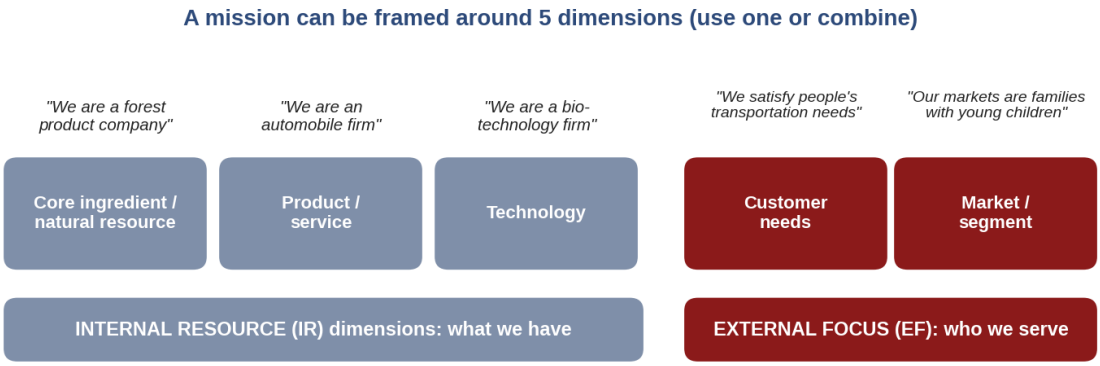

Figure 3. *Dimensions for framing a corporate mission*

Kind	Dimension	Meaning	Example
IR	Core ingredient / natural resource	Maximise value from a core ingredient; can use many technologies and serve many markets	"We are a forest product company": make anything from wood
IR	Product / service	Focus on a product or service, any technology or market	"We are an automobile firm": cars, trucks, any fuel or technology
IR	Technology	Focus on a core technology; any product, any market	"We are a bio-technology firm"
EF	Customer needs	Serve a specific set of needs with any product or technology	"We satisfy people's transportation needs": bicycles, cars, trucks, aircraft
EF	Market / market segment	Serve one segment with any product	"Our markets are families with young children" (P&G, Unilever type FMCG firms)

Combined mission example (XYZ). "To provide economy and quality-minded frequent business travellers with a premier lodging facility ..." combines **market segment (EF)** = economy and quality-minded frequent business travellers with **product / service (IR)** = premier lodging facility.

Evolving the mission: if opportunities are scarce under the current mission, or a target of opportunity appears, the firm should consider **broadening** it. Example: XYZ moved from "We want the driest diapers" to "helping moms with all facets of baby's health development", which led to new products such as training pants and baby wipes.

Discussion scenario from the slide. Critique: "The overall mission of KDT is to provide cutting-edge Internet services to consumer and business clients, while increasing the value of shareholders' investment." **Answer in the lecture:** "cutting-edge Internet services" is the product / service (IR) dimension; "consumer and business clients" is the market (EF) dimension.

5. Activity 2: Establishing SBUs

Legally, SBUs are part of the group, but each is **run like a separate business** with its own profit-and-loss responsibility. Treating disparate businesses as separate SBUs lets management recognise that each needs its own focus on resources, customers, competitors and environment.

An SBU has all three of these	Meaning
1. A single business or collection of related businesses	Can be planned separately from the rest of the company
2. Its own set of competitors	Competes with different rivals (ITC Hotels vs ITC Foods)
3. A leader responsible for strategic planning and profit performance	SBU head has P&L responsibility and authority to decide how to compete (lowest cost, premium quality, or widest availability)

Why separate SBUs? Each has its own customers, competitors, partners, distribution channels and operations, so it is more effective and efficient to run them separately. A key test: if the **target market and customers differ**, make separate SBUs; if the products differ but serve similar customers through the same channels, keep them in one SBU.

Examples

- **ITC Foods** is one SBU holding related businesses (noodles, biscuits, atta, beverages, ...), but **ITC Hotels** is a different SBU with very different customers and competitors.
- **HUL** groups skin, hair and oral care brands into one Personal Care SBU, because they serve the same end customer through the same channels, sales officers and retailers.

HUL SBU	What it covers	Example brands
Home Care	Detergents, dishwashing, household cleaners	Surf Excel, Rin, Wheel, Vim
Personal Care	Soaps, skin care, hair care, deodorants, oral care	Lux, Lifebuoy, Dove, Sunsilk, Lakmé, Axe
Foods and Refreshments	Tea, coffee, packaged foods	Brooke Bond, Bru, Kissan, Knorr, Kwality Wall's
Beauty and Wellbeing	Dedicated premium and aspiring cosmetic / wellness categories	-
Health and Wellbeing	Health supplements and related products	-

Corporate level keeps the right to. Open new SBUs, shut an SBU that is not doing well, and decide how many resources each SBU receives. The SBU head decides *how and where to compete* inside the corporate direction.

6. Names and spellings corrected from the transcript

The automatic transcript garbles several names. These notes use the correct forms.

Transcript	Correct
‘SBO’, ‘SPO’, ‘ESBU’, ‘SBV’	SBU (strategic business unit)
‘PNG’	P&G
‘Nan Pro’, ‘Nesle’	Nestlé (NAN PRO is a Nestlé infant formula brand)
‘HL’, ‘HUL’ in the transcript	HUL (Hindustan Unilever)

7. Key terms

Term	Meaning
Corporate level	Top executives (chairman, board, CXOs) who decide for the whole group
SBU	Strategic business unit: a business run separately, with its own competitors and a leader responsible for profit
Functional level	Marketing, HR, operations and similar functions inside an SBU
Corporate mission	What the organisation is, why it exists, and which businesses it will and will not be in
Internal resource (IR) dimension	Mission framed by core ingredient, product/service or technology
External focus (EF) dimension	Mission framed by customer needs or market segment
P&L responsibility	Accountability for profit and loss, held by the SBU head

8. Quick revision points

- Levels: corporate, SBU, functional. Marketing planning sits at the functional level and follows direction from above.
- Corporate activities: define the mission, establish SBUs, allocate resources, assess growth opportunities.
- A mission says why the company exists and which businesses it will and will not enter (McDonald's, Google).

- Five mission dimensions: core ingredient, product/service, technology (internal) and customer needs, market segment (external). They can be combined.
- A mission can evolve when opportunities are scarce (XYZ: from driest diapers to baby health development).
- An SBU has its own business, its own competitors and a leader responsible for profit; it is separate when its customers and competitors differ (ITC Hotels vs ITC Foods).

Marketing Management

Week 1, Lecture 4: Strategic Planning at the Corporate Level: Resource Allocation and Business Portfolio

1. Core idea of the lecture

The third corporate-level activity is deciding **which SBU gets more resources and which gets less**. The lecture explains the BCG (growth-share) matrix, its four quadrants and its limitations, and then introduces the GE-McKinsey matrix as a more complete tool.

> **In one line.** BCG sorts SBUs by relative market share and market growth rate into stars, cash cows, question marks and dogs; GE-McKinsey replaces these two proxies with weighted indexes of business unit strength and industry attractiveness.

2. Axes of the BCG matrix

Axis	What it shows	Assumption behind it
X-axis: **Relative market share**	SBU's market share ÷ market share of the **largest competing SBU** in the same industry. Above 1 means you are the leader (left side); below 1 means not the leader (right side)	More market share means more profitability (experience curve: more units made, lower cost per unit). So it is a **proxy for business profitability** and for **cash generation**
Y-axis: **Market growth rate**	How fast the market is growing (new customers being added). The diagram splits at about 10%	Fast growth means an attractive industry (proxy for **industry attractiveness**), but also **cash consumption**: you must spend to tap the growing market

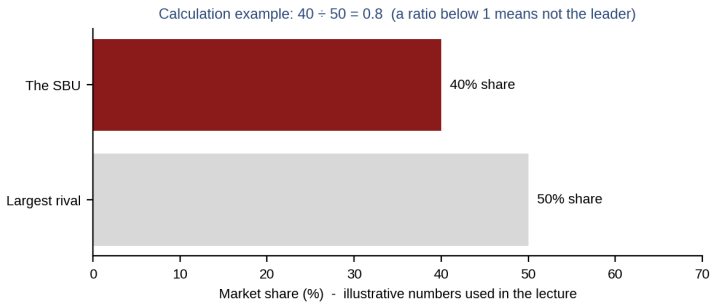

Figure 1. *How to calculate relative market share (illustrative numbers from the lecture)*

Calculation example: if an SBU has 40% share and the largest rival has 50%, relative market share = 40/50 = 0.8, so it falls to the right of the 1x line (not the leader). If the SBU is itself the largest player in its industry, its ratio is greater than 1 and it falls on the left. (In the lecture, ITC Foods is plotted as a leader, i.e. a cash cow.)

3. The four quadrants

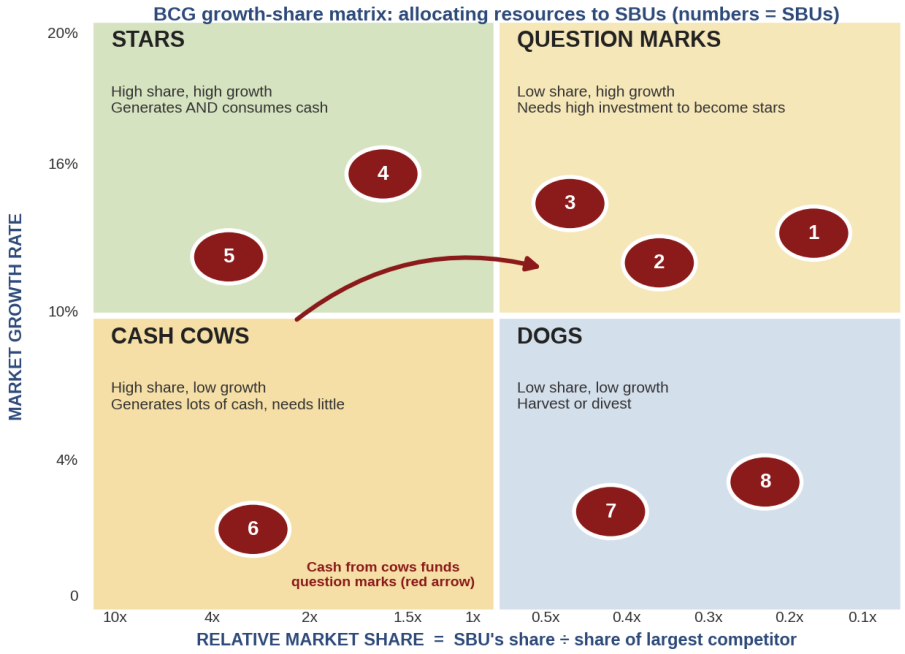

Figure 2. BCG matrix with SBUs numbered 1 to 8 (as in the lecture slide)

Quadrant	Position	Cash behaviour	Lecture example and what to do
Stars (SBUs 4, 5)	High relative share, high growth	Generates a lot of cash **and** consumes a lot, to keep tapping the growing market	ITC Hotels (assumed to lead rivals such as the Taj group; market growing above about 12-14%). Keep investing
Cash cows (SBU 6)	High relative share, low growth (mature industry)	Needs less fresh investment; high share ensures more cash; **cash generating**	ITC Foods, plotted as the largest player in its industry. Like a cow giving milk that can be made into butter or ghee. Use its cash for other SBUs
Question marks (SBUs 1, 2, 3)	Low relative share, high growth	Not generating cash but needs cash; **requires high investment to move to stars**	ITC Agarbatti (assumed). Fed from cow cash; may become stars, stay for long, or slip to dogs. Another example mentioned: smart glasses with built-in camera, a growing market
Dogs (SBUs 7, 8)	Low relative share, low growth	Not generating enough cash; does not need much either; little future	CDs and disks (market shrank as pen drives took over). **Harvest or divest**

How companies treat each kind of SBU. Cash cows: collect the cash. **Question marks**: if promising, give extra cash from cows so they can become stars; if not, they may remain or slide to dogs. **Stars**: keep funding. **Dogs**: give minimal support so loyal users keep buying, try innovation to revive them, or sell / close. Example: Netflix shut its DVD-by-mail SBU in the early 2020s when it gave only about 1% of the business.

4. Limitations of the BCG matrix

- **Market growth rate alone is not industry attractiveness.** If competitive intensity (number of rivals) is high, the industry may be unattractive even with high growth, and BCG ignores this.
- **Relative market share is not always a reliable proxy for profitability.** Firms can buy share through heavy discounts and offers. Example: Ola gave many vouchers and low fares for years, gaining share without matching profitability.

- **Depends on how the market is defined.** BMW in the entire car market has a share below about 5% (looks like a dog) but is highly profitable in the luxury / premium segment. Redefining the market moves an SBU to a different cell.
- Other factors are missing, and many firms have **imitated** it, so it is considered incomplete today.

5. A better tool: GE-McKinsey matrix

A 3 x 3 matrix (nine cells) instead of four. Many factors are combined into two indexes, so it is more complete than BCG.

	Y-axis: Industry attractiveness	X-axis: Business unit strength
Replaces	Market growth rate (BCG's proxy)	Relative market share (BCG's proxy for profitability)
Made up of (factors)	Market growth rate, market size, demand variability, industry profitability, industry rivalry (competitive intensity), global opportunities, macroenvironmental factors (PEST)	Market share, growth in market share, brand equity, distribution channel access, production capacity, profit margins relative to competitors
Levels	High, Medium, Low	High, Medium, Low

How the score is computed. Each factor gets a **value** and a **weighting** appropriate for the industry. **Index = (factor value$_1$ × weight$_1$) + (factor value$_2$ × weight$_2$) + ... + (factor value$_N$ × weight$_N$)**, calculated separately for industry attractiveness and for business unit strength (scores are relative to competitors). Then each SBU is plotted in the nine-cell grid and resource-allocation decisions follow from the cell it falls in.

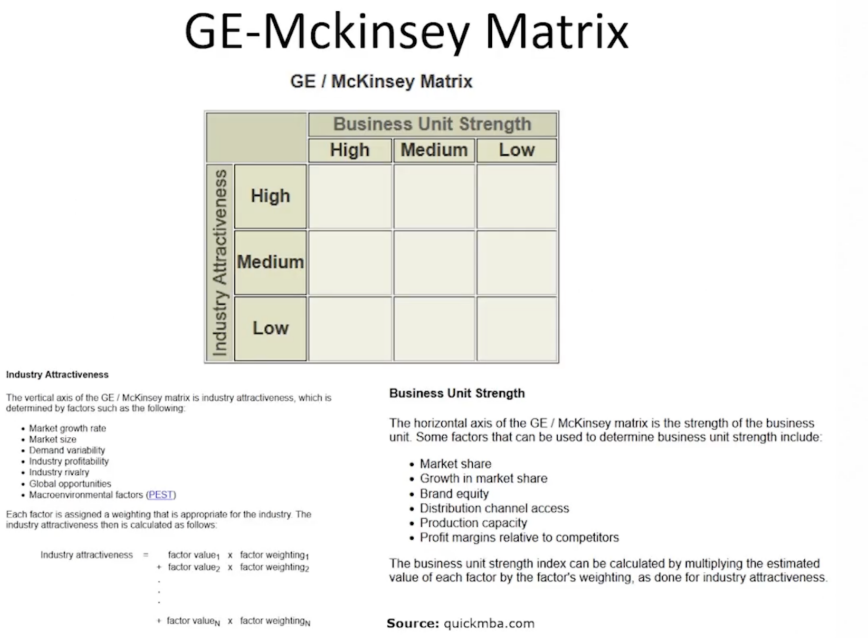

Figure 3. *Lecture slide: GE-McKinsey matrix with factors for each axis (source on slide: quickmba.com)*

Note: the lecture transcript provided ends while explaining how SBUs are plotted in this matrix, so cell-wise strategies are not covered here.

Check the lecturer's example. The lecture first uses 40% and 50% only to show how to calculate relative market share (40/50 = 0.8, so not the leader), and then plots ITC Foods as a cash cow, which needs a ratio above 1. Treat the 40/50 case as a calculation example, not as ITC Foods' actual position.

6. Names and spellings corrected from the transcript

The automatic transcript garbles several names. These notes use the correct forms.

Transcript	Correct
‘PCG matrix’	BCG matrix

Transcript	Correct
‘G Mekenzie matrix’	GE-McKinsey matrix
‘NS foods’, ‘HL foods’	unclear in the transcript: a competing foods SBU such as Nestlé or HUL
‘Ola glasses’	unclear in the transcript: smart glasses with a built-in camera, as the lecturer describes them
‘early 2020 23 24’ (Netflix)	early 2020s (the lecturer says the DVD-by-mail SBU was about 1% of the business)

7. Key terms

Term	Meaning
Relative market share	SBU's share divided by the share of the largest competitor
Market growth rate	How fast the market is growing; proxy for industry attractiveness in BCG
Star	High relative share, high growth SBU
Cash cow	High relative share, low growth SBU that generates cash
Question mark	Low relative share, high growth SBU that needs investment
Dog	Low relative share, low growth SBU; harvest or divest
Experience curve	More units produced lowers the cost per unit
GE-McKinsey matrix	3 x 3 matrix of industry attractiveness against business unit strength, using weighted factors

8. Quick revision points

- BCG axes: relative market share (x) and market growth rate (y, split near 10%).
- Stars: high share, high growth. Cash cows: high share, low growth. Question marks: low share, high growth. Dogs: low share, low growth.
- Cash from cows funds promising question marks; dogs are harvested or divested.
- Limits: growth rate ignores competitive intensity; share is not always profit; depends on how the market is defined.
- GE-McKinsey: 9 cells; industry attractiveness against business unit strength, each a weighted sum of factors.
